

# STORAGECRAFT® RECOVER-ABILITY™ SOLUTION

Disaster stinks. Disaster recovery doesn't have to. The StorageCraft® Recover-Ability™ solution lets you guarantee a fast, reliable recovery for your customers every time, from every disaster. It's a complete, end-to-end solution that gives you everything you need to offer flexible backup and disaster recovery as a service and feel good about it. The software that makes up the StorageCraft Recover-Ability solution works seamlessly together to deliver the four pieces of great disaster recovery:

## StorageCraft® ShadowProtect®

StorageCraft ShadowProtect delivers fast and reliable backup and disaster recovery.

- Complete system, image-based backup—including operating system, applications, configuration, services, personal settings, and data.
- Bare metal recovery to the same system, dissimilar hardware, or virtual environments.
- Simple migration to new Windows servers, desktops, and laptops.
- Reliable testing using StorageCraft® VirtualBoot™ technology.

## StorageCraft® ImageManager™

StorageCraft ImageManager is a companion to ShadowProtect that expands your ability to back up your data and recover from a disaster.

- Easy and fast replication to offsite locations, including the cloud.
- Automatic consolidation and retention of ShadowProtect backup image files.
- Verification of ShadowProtect backup image files.
- Pre-staging of backups for ultra-fast recovery using patented StorageCraft® HeadStart Restore®.

## StorageCraft® ShadowControl® CMD

StorageCraft ShadowControl CMD is a utility that allows you to monitor all ShadowProtect backups.

- Detailed, web-based reporting on individual machines or every system in your organization.
- Ability to set specific rules for your particular backup environment.
- Automatic notification in the event of a status change.
- Quick checking to ensure backups are running properly.

## StorageCraft® Cloud Services™

StorageCraft Cloud Services takes the power of ShadowProtect to the cloud.

- Fast virtualization in the cloud after site-destroying events.
- Options for file-and-folder recovery.
- Seamless archiving in the cloud.
- Premium encryption and data center security standards for safe and secure data storage.
